TO WHOM IT MAY CONCERN

This is to certify that our Laerdal Medical model "I V TORSO" is the only manikin The Laerdal IV Torso allows practicing of intravenous access techniques for both advanced cardiac life support and trauma, delivered by organizations around the world. The IV Torso has been specifically designed to meet the key educational goals of training programs with following features. It is a proprietary article of Laerdal Medical A/s Norway.

No other company manufactures the intubation training models with similar features.

Product benefits:

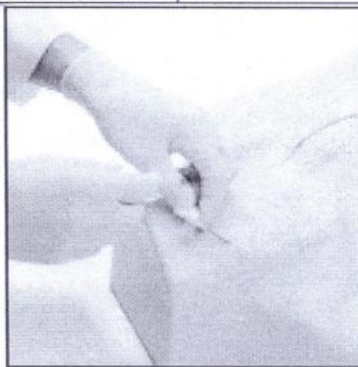

- IV access area is simulated by soft pads realistic skin, having exact feel of human skin.
- The simulated veins inside the pads provide a natural resistance during puncture and a natural flashback of blood
- When the needle is withdrawn, both veins and skin will self seal so that the site of puncture is not visible to the next student
- No setup for instructors as pads are pre-filled with simulated blood
- The Laerdal IV Torso comes with a carry case for easy transportation and storage

Product features:

- The Laerdal IV Torso enables the practice of IV access to the:
 - External jugular vein, Subclavian vein, Femoral vein
 - Internal jugular vein via the anterior, central and posterior approach
- A pulse bulb enables the instructor to create a palpable pulse in the manikin's arteries
- Long catheters can be placed into the training model
- Realistic tissue simulation
- Both Neck Pad and Femoral Pad are replaceable
- Pads can be replaced without use of any tools

Internal jugular vein access

External jugular vein access

Pulse simulation

Supplied with a neck pad, a femoral pad, 250 ml bottle of simulated blood, directions for use and hard carrying case.
