DRYSTAR 5503

Ecological technology in an easy-to-use system

The Direct Digital dry imaging technology provides easy and convenient use. The heat-sensitive characteristics of DRYSTAR DT2 make daylight loading effortless, and as simple as inserting a CD into your PC. With no wet processing or darkroom required, there is no need for cleaning products, time-consuming adjustments or chemical disposal. Image processing is more efficient and cost-effective. The DRYSTAR DT2 packaging is fully recyclable and, combined with the elimination of processing chemicals, provides a more environmentally friendly solution.

Consistently clear and sharp images

DRYSTAR DT2 is built on a 168µm-thick PET base, coated with silver salts and covered with a protective top layer for resistance to scratches and moisture. The PET base has rounded corners, to allow the medium to be handled in the same way as regular X-ray film. The silver-based imaging layer is heat-sensitive rather than light-sensitive, providing low fog and high contrast, combined with excellent image stability.
