Summary of Safety and Effectiveness Data Relating to Substantial Equivalence

Proprietary Name: Dräger-Vapor® 2000

Classification Name: Vaporizer, Anesthesia, Non-heated

Device Class: Class II

Initial Distributor: North American Dräger
3135 Quarry Road
Telford, Pennsylvania 18969

Establishment Registration Number: 2517967

Manufacturer: Drägerwerk AG
Lübeck, Germany

Establishment Registration Number: 2517967

Device to which substantial equivalence is claimed: Dräger-Vapor® 19.1 K940255

Device Description:

The Dräger-Vapor 2000 (Vapor 2000) is a concentration calibrated non-heated vaporizer for vaporizing liquid anesthetic agents.

Intended Use:

The Vapor 2000 is intended for vaporization and delivery of a controlled amount of liquid anesthetic agent. The Vapor 2000 is designed and labeled accordingly for use with Enflurane, Isoflurane, Halothane, and Sevoflurane.

Substantial Equivalence:

The Vapor 2000 is substantially equivalent to the Dräger-Vapor 19.1 (Vapor 19.1). Both are concentration calibrated, non-heated vaporizers for vaporizing liquid anesthetic agents with a vaporizing chamber bypass. Both the Vapor 2000 and Vapor 19.1 are available with attached funnel or key-index filling systems. The Vapor 2000 will also be available with the Quik-Fil™ filling system.

The Vapor 2000 differs slightly from the Vapor 19.1 in that the Vapor 2000 has a transport mode which secures the vaporizer from spillage of liquid agent, leakage of anesthetic vapor, and closes off the vaporizing chamber isolating liquid agent or vapors from the rest of the vaporizer.

Professor (Dr.) Ram Chandra Barik
विभागाध्यक्ष / Head of the Department
हृदय रोग विज्ञान विभाग / Department of Cardiology

The Vapor 2000 has a larger reservoir than the Vapor 19.1.

The Vapor 2000 and the Vapor 19.1 have the same intended use and principal of operation and are substantially equivalent.

Qualification of the Vapor 2000 included testing to demonstrate compliance with ASTM Standard F 1161-88, and the effect of temperature, gas flow, duration of use, tilting, and back pressure on concentration output.
